

PRODUCT DATA SHEET

STOPAQ® WRAPPINGBAND EZHT

Product Information

Product description: Stopaq[®] Wrappingband EZHT is a non-crosslinked, non-crystalline, monolithic, viscous polymer based, prefabricated patch and wrap coating with cold flow, self-healing, viscoelastic properties that is specifically designed for high temperature applications.

Stopaq® Wrappingband EZHT is a unique, cost-effective product intended to be used for a wide range of applications where water ingress and/or corrosion is a problem. Stopaq® Wrappingband EZHT is easy to install offering excellent sealing and corrosion preventing properties. The material contains a reinforcement fibre mesh and has a greyish polyester non-woven fibre top layer that allows for immediate (UV-reflective) painting or coating after installation. Stopaq® Wrappingband EZHT shows excellent adhesion properties without extensive surface pre-treatment to various substrates like steel, PE, PP, epoxy-coatings, and polyurethane. The material does not cure and can be cold-applied. The product offers a long-term performance in e.g. commercial, residential, utilities, telecommunications, transportation, electrical, water, wastewater, agricultural, and industrial uses.

Stopaq[®] Wrappingband EZHT can be coated with several types of topcoatings, e.g. 2-component coatings like polysiloxanes, epoxies or polyurethanes, or 1-component coatings like waterborne acrylics.

Features

- Controlled cold flow providing permanent inflow into the finest pores of the substrate
- High temperature resistance
- · Conforms to irregular shapes
- Low surface tension; adheres on many types of dry substrates at a molecular level
- Adhesion based on vanderWaals forces
- Surface tolerant: no blasting techniques required, wire brushing is sufficient (ISO 8501-1: St 2)
- Constant film thickness
- · Inert to ageing and weathering
- Resistant to many chemicals like water, salts, acids, alkalis, polar solvents, etc. For additional information, please consult Stopag B.V.

Benefits:

- Environmentally friendly, no health and safety hazards to humans
- · Fast and easy to apply
- Easy to control application
- Can be moulded onto various types of irregular shaped objects
- · No osmosis or underfilm migration of moisture
- Guaranteed performance

Application examples

Steel constructions: As a primary layer for corrosion prevention of structural steel.

Pipelines and fittings: As a primary layer for protection against external corrosion of carbon steel, alloyed steel and ductile iron pipes and fittings like elbows, bends, tees, reducers, and flanges.

Product properties of Stopaq® Wrappingband EZHT					
Colour	Green				
Thickness	2.0 mm ± 10%				
Density	1.5 ± 0.1 g/cm³ (ISO 1183-1)				
Temperature	Operational: - 45°C to + 95°C				
ranges	Short term: + 115°C				
Water absorption	< 0.03% (ASTM D570) (compound only, not for backing)				
Drip resistance	Tested 48h@+145°C *): No dripping of compound				
Peel test	Tested on steel (St 2 / St 3) and coatings like PP and FBE at +23°C and +95°C*. Results on all substrates:				
	 Cohesive failure, no evidence of adhesive failure 				
	– ≥ 95% coverage of surface				
	Coating leaves a film of corrosion preventive compound on the substrate.				

^{*)} According to ISO 21809-3:2008/Amendment 1:2011

General order information				
Product	Stopaq® Wrappingband EZHT is available in rolls of various widths and lengths: Product dimensions and contents: 100mm x 10m; 6 pcs/box; 180 pcs/pallet 200mm x 10m; 2 pcs/box; 96 pcs/pallet 300mm x 10m; 2 pcs/box; 80 pcs/pallet Other sizes on request.			
Handling	Handle with care. Keep boxes upright.			
Storage	Store indoor, clean and dry, away from direct sunlight in a cool place below +45°C. Unlimited shelf life.

THE DESCRIPTION OF	HEET STOPAQ® WRAPPINGBAND EZHT			
Application instru	ction: Job preparation	Application instru	ction: Brief version	
Tools, equipment and auxiliaries	Fools, equipment – Temperature probe, Dew point tester, High		See specific Stopaq coating instructions for e.g. beams, profiles, flat surfaces, pipelines and fittings, etc.	
	 Scissors, Knife, Measuring tape, Steel seam-roller Abrading pads, Wire brushes Isopropyl alcohol, cas. nr. 67-63-0 Personal protective gear 	Patching	Start with removal of a small part of the release liner and apply the Wrappingband onto the substrate. Apply Wrappingband without any tension onto the substrate. Avoid air-enclosures. Mould the Wrappingband tight onto the substrate	
Additional coating materials	Depending on the situation, various coatings may be applied on top e.g.:		surfaces. The use of a steel seam-roller will promote proper adhesion.	
	 1-component waterborne acrylic paint 2-component polysiloxanes, 2-component polyurethanes or 2-component epoxies Consult Stopaq b.v. for further information. 	Release foil	Do not remove the release foil before application of the Wrappingband. Remove just prior to application of the Wrappingband onto the surface.	
High humidity	Stopaq® Wrappingband EZHT can be applied in a humid atmosphere. The substrate should be free from condensing water which can be reached by keeping the temperature at least 3°C	Overlap of patches	Side-by-side overlap: ≥ 10 mm Consecutive rolls: ≥ 50 mm Use a steel seam-roller to ensure proper adhesion at overlaps.	
	above dew point.			
Work area and	The substrate surface should be dry, clean and		ction: Quality control	
Product conditions	protected against negative weather influences. Stopaq® Wrappingband EZHT should be dry and the temperature should preferably be between	Visual inspection	The appearance of Stopaq® Wrappingband EZHT must look smooth and tight and should be shaped around all details and into corners.	
	+30°C and +50°C for the ease of application.	Holiday detection	In case of application onto conductive substrates like steel, holiday testing can be carried out with a voltage of 5 kV + 5kV/mm immediately after	
	ction: Surface preparation		application of Stopaq [®] Wrappingband EZHT. A	
General	The area to be coated has to be clean, dry, and free from oil, grease and dust. All contamination including mill-scale has to be removed.		brush probe is recommended. No further testing is required.	
Degreasing	Degrease surfaces with isopropyl alcohol and e.g. a lint-free cloth.	Application instruction: Top-coatings		
Salts and bacteria	No need for additional cleaning.	Application	Stopaq [®] Wrappingband EZHT can be over-	
Preventing condensation of water	Prior to and during the application, the temperature of the substrate(s) must be at least 3°C above the dew point.		coated immediately after application. Please consult Stopaq b.v. for further information.	
Substrate	Temperature of the substrate should not be	Handling and com	misioning	
temperature	beyond -30°C and +95°C, and should preferably be between +30°C and +50°C for the ease of application. Preheating may be required.	Exposure to loads	Objects coated with Stopaq® Wrappingband EZHT should not be exposed to loads e.g. from supports- or lifting equipment.	
Steel Other substrates	Minimum requirement for surface preparation is St 2 according to ISO 8501-1. Roughness profile is not essential for adhesion. De-gloss and degrease the surfaces by using an	Commissioning	Commissioning is possible immediately after completion of the coating application. Consult data sheets for specific instructions of additional	
Other substrates	abrasive pad and isopropyl alcohol.		materials used.	
Cleanliness check	Take a piece of Wrappingband of ± 150 mm length, remove the release foil and fold it back for about 25 mm. Put the Wrappingband onto the surface, press it firmly and leave it for 5 minutes. Pull the Wrappingband from the substrate with an angle of app. 135 deg. and a speed of 100 mm/min. Cohesive fracture should occur and coverage of the surface with remaining material should be ≥ 85%. If this is	Information
